

Yue Qiu

"Great truth in simple words."

About me

Holland's Matrix: IAR
MBTI: INFJ
Being persistent,
empathetic,
a good listener,
adaptable, &
curious.

Career Interests

Renewable Energy
Numerical Simulation
Reactive CFD
Multiphysics Model
Project management

Sports Lover

Badminton | ● ● ● ●
Swimming | ● ● ● ● ●
Running | ● ● ● ● ●
Yoga | ● ● ● ●

Activities

4yrs Lab supervisor
3yrs Culture Night volunteer
Division Trivselgruppen
Badminton Club

Ph.D. graduate trained in **Engineering Physics**, specifically the utilization of renewable energy sources. Strongly motivated to apply scientific research to support industrial development towards a sustainable future. Specialize in **CFD-based multiphysics simulation** and **model development** to characterize the heat & mass transfer in reactive systems, complemented by experimental experiences.

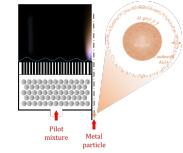

EXPERIENCE

2025
-2020

CFD Model Development for Metallic Particle Combustion

PH.D. RESEARCHER · Lund University

Reviewed physico-chemical properties of metallic particles (Al & Fe) • Developed two CFD solvers for multiphase, reacting flows in OpenFOAM Eulerian / Lagrangian framework • Validated with optical diagnostic experiments.

2020
-2019

Thermal Design & Test of High-Speed Optical Transceivers

THERMAL ENGINEER · Coherent

Flotherm thermal simulations • Climatic chamber tests • Performance optimization of Thermal Interface Materials (TIMs) • Technical documentation.

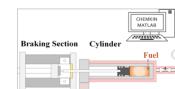

2019
-2016

Experimental & Modeling Studies of Fuel Chemistry

RESEARCH ASSISTANT · Shanghai Jiao Tong University

Ignition experiments in varied T/P chambers • 0/1-D flame simulation in CHEMKIN PRO and MATLAB • parameterization studies • Graph-based algorithms for mechanism reduction.

EDUCATION

2025

Lund University (LUND)

PH.D. · Engineering Physics

metal combustion, multiphase physics, thermal analysis, CFD, numerical simulation.

2019

Shanghai Jiao Tong University (SJTU)

M.A. · Energy & Power Engineering

GPA: 3.8/4 top 5%. exp. & modeling of reactive flow systems, mechanism reduction, data analysis.

2016

Huazhong University of Science and Technology (HUST)

B.A. · New Energy Science & Technology

GPA: 91/100, top 5%. fluid-mechanics, thermodynamics, heat-transfer, renewable energy systems.

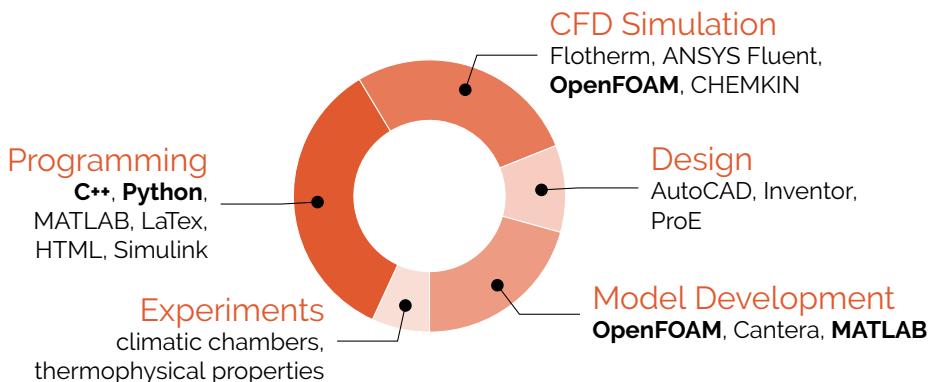

INTERNSHIPS

- 2018 **GE Aerospace**, Edison Engineering Development Program, China.
Jul.
- 2018 **KAUST**, 1st Clean Combustion Winter School, Saudi Arabia.
Feb.
- 2015 **Cummins Fuel Systems**, Product Engineering, China.
Jul.

ACHIEVEMENTS

- 📄 x 16 (1st x 4, 2nd x 3)
🏆 x 7 (oral x 1, poster x 4)
Ph.D. student Travel grants x 4
Best Popular Science Article
Master scholarships x 2
Outstanding Bachelor's Thesis
1 National scholarships x 3

Professional Summary

An Engineering PhD graduate with 5+ years of combined industry and research experience in thermal and flow simulations:

- 💻 Proficient in CFD-based multiphysics simulation with Flotherm, ANSYS Fluent, and OpenFOAM. Well-versed in solver development, implementation, and HPC optimization across academic and industry projects.
- 🔧 Demonstrated ability in experimental validation and benchmarking to assess solver performance and sensitivity.
- 📝 Strong programming skills in C++, Python, and MATLAB with experience in data analysis, automated testing and simulation workflows.
- 🎓 Strong background in heat transfer, thermodynamics, and fluid mechanics, providing a thorough understanding of CFD theories and numerical algorithms.
- 🤝 Experienced in effective collaboration across R&D divisions and the manufacturing teams for innovative engineering solutions.

Industry & Research Experience

Lund University

2021 Jan. – **PhD researcher, Department of Physics.**

- 2025 Aug.
 - Conducted an extensive literature review on the physio-chemical properties of metallic particles (Iron and Aluminum) under high-temperature conditions, with applications for more efficient energy release.
 - Developed two advanced CFD solvers in OpenFOAM to simulate and analyze the complex physio-chemical heat and mass transport phenomena, employing both Lagrangian and Eulerian frameworks.
 - Collaborated closely with the experimental teams, using optical diagnostic techniques to validate models and enhance the understanding of metallic material behavior under extreme conditions.

Finisar Corp. (Now Coherent Corp.)

2019 Dec. **Thermal Engineer, R&D.**

- 2020 Dec.
 - Conducted CFD simulations with Flotherm to optimize thermal performance of high-speed optical transceivers, ensuring reliability under diverse conditions.
 - Designed and performed verification tests in wind tunnels against simulations.
 - Developed a standardized database and test manual for Thermal Interface Materials (TIMs) to improve prediction accuracy and streamline workflows.

GE Aerospace

2018 Jul. **Summer Intern, Edison Engineering Development Program.**

- Aug.
 - Contributed to aircraft tube redesign projects, integrating thermal and mechanical analysis to enhance performance and reduce costs.
 - Received training in proposing design modifications, and gained exposure to cross-disciplinary collaboration across thermal, structural, and manufacturing teams in aerospace component design.

Shanghai Jiao Tong University

2016 Dec. **Research assistant.**

- 2019 Jun.
 - Designed and performed controlled high-T and high-P experiments in shock tube and rapid compression to study the ignition behavior of transportation fuels.
 - Conducted simulations with CHEMKIN PRO and MATLAB to provide more details of the evolution of temperature and composition which was not measured in experiments.
 - Performed parameterized studies in both simulation and experiments to assess how variations in environmental conditions (pressure, composition, and temperature) will impact system performance.
 - Developed a MATLAB-based program implementing Directed Relation Graph (DRG) and DRG with Error Propagation (DRGEP) algorithms to simplify and accelerate ignition simulations.

Cummins Fuel Systems (Wuhan)

2015 Feb. **Summer Intern, Product Engineering.**

- Assisted in product quality inspection of high-precision fuel injectors and pumps.
 - Completed Six Sigma training for quality and process improvement.

Education

2021–2025 : **PhD, Department of Physics, Lund University (LUND), Lund, Sweden.**

Advisor: Prof. Elna Heimdal Nilsson, Prof. Xue-Song Bai

metal combustion, multiphase physics, thermal analysis, reaction kinetics, computational fluid dynamics (CFD), numerical simulation

2016–2019 : **Master of Engineering, School of Mechanical Engineering, Shanghai Jiao Tong University (SJTU), Shanghai, China.**

Advisor: Prof. Xingcai Lu

experiments and modeling of reactive flow systems, algorithm-based mechanism reduction, data analysis

GPA : 3.84/4, top 5%

2012–2016 : **Bachelor of Engineering, New Energy Science & Technology, Huazhong University of Science & Technology (HUST), Wuhan, China.**

Advisor: Prof. Xiaobei Cheng

thermodynamics, heat transfer, fluid mechanics, renewable energy systems (solar, wind, biomass, hydrogen, fuel cells)

GPA : 91.09/100, top 5%

Technical Skills

Thermal analysis & CFD Simulation: Flotherm, ANSYS Fluent, OpenFOAM

Design: AutoCAD / Inventor, ProE

Experiments: climatic chamber, thermal conductivity measurements

Programming & Automation: Python, MATLAB, C++ (simulation workflows & data analysis)

Multiphysics Modeling: Cantera, CHEMKIN

Teaching Assistantship

Fall, 2021–24 Quantum physics lab of Introduction to University Physics

Spring, 22–24

Fall, 2023 Spectroscopy lab for Atomic and Molecular Physics

Spring, 2023 Vibration lab for Energy and Environmental Physics

Honors & Awards

2025 Travel grant from the ***Styrelsen vid Lunds Tekniska Högskola (SLTH)***.

2024 PhD student grant from the ***Royal Swedish Academy of Sciences***.

2024 Travel grant from the ***ÅForsk Foundation***.

2023 PhD student grant from the ***Royal Physiographic Society of Lund***.

2021 Awarded the ***Best Popular Science Article*** in Communicating Science LTH.

2018/2017 **Zeyuan** Scholarship, **Don You Shuqi** Scholarship in SJTU.

2016 Outstanding Graduation Thesis of Hubei Province.

2013/2014 National Scholarship.

Conferences

2025 Poster presentation in the 12th European Combustion Meeting, 2025, UK:*Numerical quantification of aluminum mass fraction profile around a steadily burning aluminum droplet with different gas-phase kinetics*.

2025 3rd Metal-enabled Cycle of Renewable Energy (MECRE) Conference, Switzerland.

2024 Oral presentation in the 40th International Symposium, Italy:*Detailed numerical simulation and experiments of a steadily burning micron-sized aluminum droplet in hot steam-dominated flows*.

2024 Poster presentation in the 2nd Metal-enabled Cycle of Renewable Energy (MECRE) Conference, Germany:*A five-stage combustion model for single micron-sized iron particles*.

2023 Poster presentation in the 11th European Combustion Meeting, France:*Modeling of single micron-sized aluminum particle burning in steam incorporating gas and surface reactions*.

2023 15th International Conference on Combustion Technologies for a Clean Environment, Portugal.

2022 Poster presentation in the 1st Metal-enabled Cycle of Renewable Energy (MECRE) Conference, Netherland / Poster presentation in the 39th International Symposium on Combustion, Canada:*A five-stage combustion model for single micron-sized iron particles*.
